accustomed (ə kəs təmd): Being in the habit or custom.
astronomical (as trə nä mi kəl): Of or relating to astronomy, which is the scientific study of stars, planets, and other objects in outer space.
bolide (bō līd): A large meteor or fireball; especially, one that explodes.
invigorate (in vi gə rāt): To cause (something) to become more active and lively.
magnitude (mag nə tüd): A number that shows the power of an earthquake.
migratory (mī grə tör ē): Having a characteristic of moving from one place to another on a periodic basis.
probability (prä bə bi lə tē): A measure of how often a particular event will happen if something (such as tossing a coin) is done repeatedly.
seismic (sīz mik): (1) Of, subject to, or caused by an earthquake; (2) Of or relating to an earth vibration caused by something else (as an explosion or the impact of a meteorite).
supersonic (sü pər sä nik): Faster than the speed of sound.
trajectory ( $\operatorname{tr} \boldsymbol{j} \mathbf{j e k} \mathrm{t}(\partial-) \mathrm{re})$ : The curved path along which something (such as a rocket) moves through the air or through space.

Accented syllables are in bold. Marks and definitions are from http://www.merriamwebster.com. Definitions are limited to the word's meaning in the article.

## Materials

(for each student or group of students)

- Two earthquake data tables
- Graphing paper
- Pencils
- Highlighters

The questions you will answer in this FACTivity are: How do the number of earthquakes from the 1990s compare to the number of earthquakes in the 2000s? How do the magnitudes of the earthquakes compare between the two time periods?

## Methods

Look at the two earthquake data tables on page 35 . Highlight the row in each table for
total earthquakes. Create two bar charts and compare total earthquakes for the 1990-1999 time period with the 2000-2009 time period. Here are a few questions to think about:

- Which year had the most earthquakes during 1990-1999?
- Which year had the most earthquakes during 2000-2009?
- Look closely at the two data tables. Circle magnitudes with the highest occurrence of earthquakes. Is the magnitude you highlighted the same in each time period?
- Do you think that the two time periods are similar or not? Why do you think this? Use evidence from the tables to help support your thinking.

Number of Earthquakes in the United States for 1990-1999
